

NEWSLETTER JANUARY 2008

Happy New Year

The RUBA team thanks you for the good collaboration during the last year and wishes you good health, fortune and much success during the year 2008.

Transport

ASTAG (Swiss Carriers Union) informed us that the pallet change pool will not be carried on in the year 2008. However, most of our carriers are prepared to continue with the exchange of pallets but only for payment. As most of the freight costs as well as public tolls will be increased in 2008 we would like to inform you that we also will have to raise our charge of freight costs for all shipments DDU as well as DDP.

Mould construction

The mould construction department is part of RUBA since the beginning in the fifties of the last century. The team of mechanics with a large experience is doing all kind of tooling, design and construction as well as special adaptations and maintenance repairs. As most of problems and damages occurring during production can be solved within short time, RUBA is in a position to meet even short delivery terms.

Price cut

The whole groundwork for the building of our new silo is done. The silo will be delivered and mounted in January 2008. We are very glad to inform you that this alleviation allows us to reduce prices for important quantities of more than 500'000 pcs.
