

NEWSLETTER OCTOBER 2012

New temporary employees

At the beginning of August we were glad to welcome two young employees in our house. Together with our professionals of the final control department they build an excellent team.

We wish both of them much succes in their new jobs!

Julia Lützelschwab

Sarah Rieder

New hydraulic machine

In the second quarter of this year we said good-bye to one of our nine injection molding machines.

The old **BOY80M machine** was used for more than 20 years.

And so we made a room for the new **Systemc 100/420-430**.

Simple operation and economic efficiency helped to improve the fully automated production of our caps and plastic parts.

New manufacture machine Mazak Variaxis i-600

At the beginning of the year, in order to create additional capacity and to renew our existing machinery, we decided to buy a new milling machine.

The special feature of the Mazak Variaxis i-600 is the 5 axis simultaneous machining.

We are pleased to have the machine already in use...

Technical details of the CNC milling machine:

Max. workpiece diameter	700 mm
Max. workpiece height	450 mm
Travel X-Axis stroke	510 mm
Travel Y-Axis stroke	910 mm
Travel Z-Axis stroke	510 mm
A-Axis (table tilt) travel	-120° to + 30°
C-Axis (table rotation) travel	+/-360°

We are pleased to present you the new website...

In order to improve our web services, we have created a new website only for wage work and tool manufacturing.

The website is modern, with fresh new design, promising pictures and simple operation. Try it for yourself:
