

# NEWSLETTER OCTOBER 2013

## New in the RUBA-team

At the beginning of March, we were glad Ms Rosemarie Zipfel joined us as a new employee in our company. Ms Zipfel is responsible for a qualified selling and order processing. She takes care together with Ms Mrazova and our two trainees, Mr Xavier and Ms Jauslin, to the needs and desires of the customers. We wish Ms Zipfel an exciting time by us.

In April we were glad to welcome an other new employee in the RUBA Thermoplast AG. Mr Michel Feijoo work in the tool constructing department. He is responsible for the manufacture and maintenance of our injection molds, as well as for various contract work. We wish Mr Feijoo much joy at work.

## CAM-module (Computer-Aided Manufacturing)

The world is becoming modern and the technology rises rapidly. We have chosen to go with the flow and allowed us the CAM module Visi. A broader definition of CAM may include with the use of computer applications for the definition of a construction plan for the tool design, the model preparation with computer-aided design, NC programming, the programming of coordination measuring machines, simulation of machine tools or the post. The program is run with the 5-axis milling machine.

## **New warehouse**

To create more space for the goods, we decided early in the year to expand our warehouse. In October the warehouse was completely finished.

## **2 additional injection molding machines**

Due to the ever increasing number of orders, we have decided to expand our machinery. In mid-October two new additional injection molding machines have found their place in our machine-park. We look forward to an even faster and more efficient production of our screw caps.
