

NEWSLETTER NOVEMBER 2014

3D Drawings

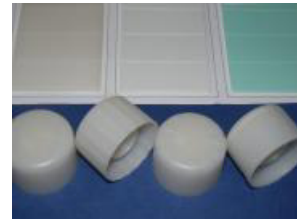

3D CAD dates are more and more requested. Also we offer not only complete 2D, but also 3D drawings. This three-dimensional method allows our customers an even better visualisation of the caps.

Further "BIO"-Tests

"BIO" is a definition of natural plastics, which are produced on the basis of renewable raw materials from naturally occurring substances.

In the years 2009 and 2010 we performed the first experiments with organic material and now our research continues...

Our latest tests have shown, that with 100%-use of thermoplastic and completely oil-free material **Arboblend 1548X** a production of "RUBA-nature-friendly" caps is possible.

EAN-Code = European Article Number
GTIN = Global Trade Item Number

Until 2009 the EAN-Code was the description of today's valid **GTIN**, what is the shortcut for "Global Trade Item Number".

For more than one year RUBA AG has achieved an international number in the GS1 (Global Standards One) and marked the products according to international standards. This Barcode in GS1 you can find on our [pallet-labels](#).

This opens new application possibilities and opportunities for delivery and storage of the products for our customers.

New employees

We are pleased to introduce you three new members of our team:

- **Mrs. Katarzyna Majdan** works in the final inspection and quality assurance department
- **Mr. Ferdinand Heynold** supports our production as Plastic Industry Technologist
- **Mrs. Teresa Miquel** is our new cleaning power
